

Bureaucracy is everyone's problem.

Bureaucracy is what happens when a process outlives the problem it was built to solve. Every quarter, some process here will have outlived its problem. Killing it is everyone's job. Not a committee.

The test is simple. If we were starting today, would we build this? If no, stop doing it. Do not file a ticket. Stop doing it.

| *A process is a hypothesis with a shelf life.*
